---

---

---

---

## What is Financial Planning?

- It formulates the method by which financial goals are to be achieved.
- There are two dimensions:
  - A Time Frame
    - Short run is probably anything less than a year.
    - Long run is anything over that; usually taken to be a two-year to five-year period.
  - A Level of Aggregation
    - Each division and operational unit should have a plan.
    - As the capital-budgeting analyses of each of the firm's divisions are added up, the firm aggregates these small projects as a big project.

2

---

---

---

---

---

---

---

---

## Financial Planning Process

- **Set up a system of projected financial statements** which can be used to analyze the effects of the operating plans.
  - Rapid awareness of deviations from plans is essential to a good control system.
- **Determine financing needs:** Capital expenditures, working capital investments, R&D investments, and major marketing expenses.
- **Forecast funds availability:** Internal and external
- **Establish and maintain a system of controls** governing the allocation and use of funds
- **Develop procedures for adjusting** the basic plan if the economic forecasts upon which the plan was based do not materialize: Feedback + modifications

3

---

---

---

---

---

---

---

---

## Components of Financial Planning

1. Sales forecast
2. Pro forma statements
3. Asset requirements
4. Financial requirements
5. Plug
6. Economic assumptions

4

---

---

---

---

---

---

---

---

## Sales Forecast

- All financial plans require a sales forecast.
- Perfect foreknowledge is impossible since sales depend on the uncertain future state of the economy.
- Businesses that specialize in macroeconomic and industry projects can help in estimating sales.

5

---

---

---

---

---

---

---

---

## Pro Forma Statements

- The financial plan will have a forecast balance sheet, a forecast income statement, and a forecast sources-and-uses-of-cash statement.
- These are called **pro forma statements** or **pro formas**.

6

---

---

---

---

---

---

---

---

### Asset Requirements

- The financial plan will describe projected capital spending.
- In addition, it will discuss the proposed uses of net working capital.

7

---

---

---

---

---

---

---

---

### Financial Requirements

- The plan will include a section on financing arrangements.
- Dividend policy and capital structure policy should be addressed.
- If new funds are to be raised, the plan should consider what kinds of securities must be sold and what methods of issuance are most appropriate.

8

---

---

---

---

---

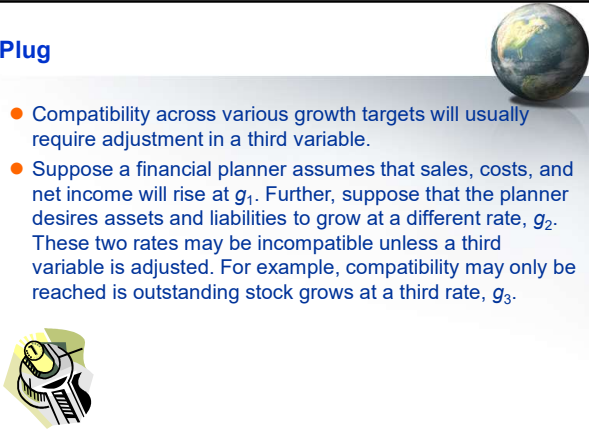

---

---

---

### Plug

- Compatibility across various growth targets will usually require adjustment in a third variable.
- Suppose a financial planner assumes that sales, costs, and net income will rise at  $g_1$ . Further, suppose that the planner desires assets and liabilities to grow at a different rate,  $g_2$ . These two rates may be incompatible unless a third variable is adjusted. For example, compatibility may only be reached if outstanding stock grows at a third rate,  $g_3$ .

9

---

---

---

---

---

---

---

---

**Example** 

- Current data

<b>Income Statement</b>		■ Pro forma	
Sales	1,200	<b>Income Statement</b>	
Costs	1,000	Sales	1,320
Net Income	200	Costs	1,100
		Net Income	220

<b>Balance Sheet</b>			
Assets 2,000	Debt	800	
	Equity	1,200	
Total 2,000	Total	2,000	

<b>Balance Sheet</b>			
Assets 2,200	Debt	880	
	Equity	1,320	
Total 2,200	Total	2,200	

10

---

---

---

---

---

---

---

---

---

---

**Example** 

- Current data

<b>Income Statement</b>		■ Pro forma w/ \$180 dividend	
Sales	1,200	<b>Income Statement</b>	
Costs	1,000	Sales	1,320
Net Income	200	Costs	1,100
		Net Income	220

<b>Balance Sheet</b>			
Assets 2,000	Debt	800	
	Equity	1,200	
Total 2,000	Total	2,000	

<b>Balance Sheet</b>			
Assets 2,200	Debt	960	
	Equity	1,240	
Total 2,200	Total	2,200	

11

---

---

---

---

---

---

---

---

---

---

**Economic Assumptions** 

- The plan must explicitly state the economic environment in which the firm expects to reside over the life of the plan.
- Interest rate forecasts are part of the plan.

12

---

---

---

---

---

---

---

---

---

---

### Sales Forecasting - Steps

- Independent divisional forecast are made on the basis of historical growth, then combined to produce a "first approximation" corporate sales forecast.
- The level of economic activity and the overall demand are forecasted.
- Estimate a firm's market share for each product line in each market, considering overall demand and competition.
- Consider impacts from exchange rate, trade agreements, governmental policies and etc.
- Estimate inflation and determine pricing tactics.
- Factor in advertising, promotional discounts, credit terms and the like.

13

---

---

---

---

---

---

---

---

### Sales Forecasting

- Accurate sales forecast is critical to the well-being of the firm.
- If the sales forecast is off, the consequences can be deadly serious.
  - If the market grows faster than the company has geared up for, the company will not be able to meet demand.
  - Overly optimistic forecasts leave the company with too much plant, equipment and inventory.
  - If the company had financed an unnecessary expansion with debt, its problems would be compounded.

14

---

---

---

---

---

---

---

---

### Growth Patterns

- A key assumption in all financial planning models is the period of high growth, and the pattern of growth during that period
  1. **No high growth:** Firm is already in stable growth.
  2. **2-stage:** High growth for a period, then it will drop to the stable growth rate.
  3. **3-stage:** High growth for a period, then it will decline gradually to a stable growth rate.

15

---

---

---

---

---

---

---

---

## Estimating Growth Rate

- **Historical Growth?**
  - Arithmetic vs. Geometric
  - Simple vs. Regression Models
  - Historical growth rates can be sensitive to the period used in the estimation.
- **Sustainable Growth Rate: Steady rate at which a firm can grow.**
  - $g = ROE \times \text{Retention ratio} = ROE \times (1 - \text{Payout ratio})$
  - A commercial lender would want to compare a potential borrower's actual growth rate with their sustainable growth rate.
  - If the actual growth rate is much higher than the sustainable growth rate, the borrower runs the risk of "growing broke" and any lending must be viewed as a down payment on a much more comprehensive lending arrangement than just one round of financing.

---

---

---

---

---

---

---

---

16

## Determinants of Growth Patterns

- The growth rate of a firm is driven by its fundamentals – how much it reinvests and how high project returns are.
  1. Size of the firm
  2. Current growth rate
  3. Barriers to entry
  4. Differential advantages

---

---

---

---

---

---

---

---

17

## Financial Stmt. Forecasting Methods

1. **Constant Sales Ratio Method:** Assumes that
    - a. each asset item must grow at the same rate as sales,
    - b. designated liability accounts also grow at the same rate as sales, and
    - c. the profit margin and dividend payout are constant.
  2. **Regression: Linear, curvilinear, or multiple regression**
  3. **Time series forecasting: Moving averages, exponential smoothing, and ARIMA (Box-Jenkins)**
  4. **Other computerized models**
- The costs of using more refined techniques must be balanced against the benefits of increased accuracy.

---

---

---

---

---

---

---

---

18

## Beware

- Financial planning models do not indicate which financial policies are the best.
- They are as good as their underlying assumptions which often simplifies real economic conditions, and you can never fully account for unexpected events.
- Without adequate financial planning, the firm may find itself moving toward the future under zero visibility.

---

---

---

---

---

---

---

---

19

## Summary

- Financial planning forces the firm to think about and forecast the future.
- It involves
  - Building a corporate financial model,
  - Making different assumptions about future operating environment,
  - Constructing pro forma financial statements, and
  - Evaluating the financial implications of strategic plans.
- Financial planning is not an end itself. Rather, it is a process toward achieving corporate goals.
